

Referrals for Early Dementia/Anti-amyloid Therapy (AAT)

*The following conditions **must be met** for the patient to be eligible:*

- At least 6 months of objective, progressive cognitive decline
- Cognitive testing in the MCI/mild dementia range:
MMSE 20-30, MoCA >18, SLUMS 19-26 (education adjusted),
Mini-Cog < 2 (or Mini-Cog 3 with concerning history) Please include the entire test, not just the score. If the score is borderline, please still include the full test if patient has history of MCI/mild dementia.
- Please optimize vascular risk factors (BP <130/80, LDL <100, A1C <6.5). First time appointments will not be delayed should accurate numbers take time to acquire.
- Recent labs: CBC, CMP, FLP, TSH, B12, A1C
- Patient must be accompanied by a caregiver to receive AAT.

The following ***do not need to be included*** and will be ordered by our team:

- MRI (specific MR sequences needed otherwise repeat MRI required)
- Amyloid PET
- Blood-based biomarkers

The patient ***does not qualify for Anti-amyloid Therapy*** under the following conditions:

- On anticoagulants
- On dual antiplatelets (single antiplatelet accepted)
- Has a bleeding disorder (platelets < 50,000 or INR >1.5)
- Unable to comply with MRI requirements (claustrophobia, etc)
- Has pacemaker/other device requiring conditional-MRI protocol (Watchman okay)
- Severe depression despite best treatment
- Active cancer or cancer treatment within 5 years (except simple skin/in-situ/stable low-risk prostate)
- Stroke, TIA or seizure within last 12 months
- Needs help with basic ADLs (indicates moderate or greater dementia)
